

Precision of Function

With our two product groups, we satisfy the highest demands on the precision and quality of our products and services.

When compensating machine component tolerances, we provide specific solutions to enable fast and user-friendly working. As a manufacturer of laminated shims and a processor of various materials, we simplify working with tolerances.

The M-Tech® Product Group's circle of customers encompasses large segments of industry, including the aviation and aerospace sector, drive systems technology and mechanical engineering.

In addition to this, we develop and manufacture stamped and deep-drawn parts. Essential, expanded functional properties are achieved through complementary technologies, such as chip removal, welding, thermal and surface treatment and assembly.

We have been supplying demanding areas of the printing machine, automotive and other industries for over 60 years.

MARTIN®

Your Partner for Precision.
