- Lift-off hinges
- Dropside hinges
- Tilt hinges
- Continuous hinges
- Plastic hinges
- Custom hinges

**HINSCHA PRODUCTION**  
hinges in every shape and size

## HINSCHA THE HINGES SPECIALIST

Our short, powerful and international company name Hinscha refers to our main product, 'Hinges'.

The concise Hinscha stands for experts in hinges and trailer parts. Through 3 generations our company evolves with a strong family atmosphere, an excellent service and a vision approved by all.

Thanks to our years of experience and market knowledge, we are the ideal partner in your quest for the best conditions and the right solution for every hinge problem. Actually, the company becomes more and more the expert manufacturer of hinges, both for large series of standard hinges and for small series of custom hinges. The production is based on the latest techniques. The design drawings come from our renowned customers worldwide or are developed by ourselves through our own

engineering know-how in the field of hinge joints. With Hinscha Projects we go a stage further. Besides producing and offering a surprisingly wide range of hinges and accessories, we also like to think along with you. In fact, we become your hinge broker. You tell us what you need and we'll find it for you.

### HINGES IN EVERY SHAPE AND SIZE

The hinges factory of Hinscha is flexible to produce both big or small hinges series, even standard or specifically custom made.

Based on your own design plan or your wishes, our hinges experts make a customized prototype on short term.

Are you in need of a large number of hinges, possibly spread in time? Then you can make a call-off contract. In this case, we will deliver your hinges over a fixed term at predetermined prices and conditions.

Call-off contracts are common in the car, truck, cabin and coach industry but also with machinery constructors and even in the world of construction. They anticipate rising prices and assure you shorter delivery times.

Did you know that lack of knowledge is the reason that 40% of hinges are not well dimensioned?

It would be a pleasure to offer you our large experience in the field of hinge joints. We will gladly help you in choosing the right type and determine the ideal strength, taking

into account your construction requirements. Hinges are mostly only a small part of a bigger construction. It's often justified to use specially adapted hinges to optimize the larger construction. In that case all practical aspects like opening angles and mounting holes can be optimally chosen or arrangements can be made to embed the hinge invisible in the construction.

A hinge can meet practically all your requirements to mount on your hinged parts.
