## **A BRIEF INTRODUCTION OF OUR COMPANY**

TRE DI Snc was established as a small company in 1979 and has grown simultaneously with the development of the North-East, where there wasn't a lack of personal initiative, ideas and work spirit. This company is known for its production of lathed metallic small parts, made to the customer's design or sample.

TRE DI specialises in the working of metals, aluminium, stainless steel and brass. Thanks to a full complement of traditional and CNC machinery and the employment of highly qualified personnel, it is able to manufacture special components, prototypes, and mass produced lathed and milled parts.

The company is structured in such a way that it can completely handle the development of a new product by using its own services following this productive procedure:

- ❖ The planning and design of the product according to the client's guidelines;
- ❖ The production of the equipment and the prototype;
- ❖ Products made to order.

The company can rely upon a large machinery park which includes:

Automatic cam lathes, medium-small with passage bar from 4 mm to 25 mm diameter complete with loader.

Automatic cam lathes, medium-large with passage bar up to 60 mm diameter complete with loader.

Automatic CNC lathes with bar loader passage useful up to 80 mm, with motorized machine tools and Y axis.

Sliding headstock lathes with passage bar 35 mm at 13 axis.

The machinery park includes about 40 machine units.
