Tepro has more than 50 years' experience and is a well-known Polish manufacturer of vacuum pumps and devices. The company's production site is located at the Baltic coast in Koszalin. Since 1999 we also provide subcontractors for automotive, gas and marine industries. The main aim of Tepro is conducting sustainable policy with the production of its own goods and subcontracting. In 2018 we had more than 16, million € turnover of which 65% of the annual revenue were obtained by the subcontracting. Wide range of services allows us to carry out complex projects from beginning to end. The company has a large capacity and is flexible in regards to its customers' needs ensuring a high level of quality and on-time delivery.

Company Structure

Tepro occupies an area of 10'000 square meter building. We are a joint stock company. TEPRO is divided into three departments: sheet metal services, machining and assembly which is backed up by a powerful staff of 270 people including 70 engineers who are capable of satisfying all the needs of our clients.

Engineering Services

Tepro S.A. offers engineering services and can help to make manufacturing drawings and specifications on behalf of its customers. Problem solving, modeling, conceptual design, detail design and product development are some of the services being offered. The company's engineers are experienced in the fields of mechanics, hydraulics and pneumatics. Having engineers situated very close to the machining facilities, it ensures the best functional designs and the most cost-effective manufacturing solutions.

Machinery & Certification

Tepro S.A. has more than 30 CNC-machines planted in its hall. These machines, combined with skilled competence, enable the company to realize assignments at a very high level of precision and quality.
