

Puntiamo alla perfezione

COMPANY PROFILE

Since 1960 CAM is a valuable partner of the main european producers of machine tools.

Strong of a huge variety of equipments and of our superfinishing conditioned workshop we are able to offer a range of services from part machining to complete assembly.

A declaration of full compliance to customer's requirements is imperative.

Our certifications

UNI EN ISO 9001:2015

EN 9100:2018

testify to our work philosophy.

OVERVIEW

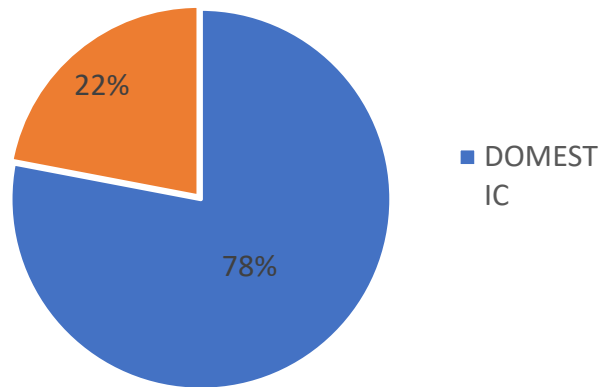

We are operational in all the sectors, but we are specially experienced in a few of them. For decades we have focused on components for machine tools, from bases to spindles, taking care also of assembly for a few customers. We are present in the steel industry where, among other things, we produce electrode holders and injectors for bath enrichment. We develop details and subassemblies for the engineering and research industries.

In the field of printing and plastic extrusion machines we have developed entire portions of production lines starting from component machining up to the creation of on-board systems.

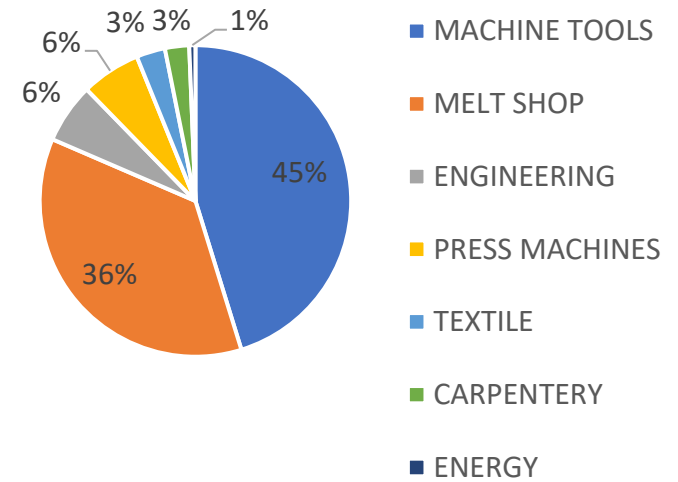

Machining for large carpenters' shops completes the picture together with the development of components for the textile industry, postal automation and aerospace&defence sectors.

Thanks to a fully equipped, air-conditioned metrological room and to high precision portable laser tools, we are able to provide control and testing certificates for all our products. <http://camsrl.it/en/sectors/>
